Instructions for Adding One Pet Cage to Another Using a Common Wall Between Them.

Roverpet builds a modular system allowing the pet owner to connect one dog cage to another dog cage using a common wall.

The enclosed #250 divider clips are to add a second unit to the first pet cage.

Remove the #200 panel hinge clip from pet cage one from the side that will be dividing wall. Replace the #200 panel hinge clip with a #250 divider clip, but install them to the panels from the of unit one. This will allow the attachment of a third panel without the clips interfering with one and other.

Align the attaching PVC panels of pet cage two with the front and back panels of enclosure one at the point of attachment.

Apply the #250 divider clips from the outside of the pet cages.
